

Bridge

Investor & Public Communications Brief

March 2026 | Prepared for Justin Tiemann

Bridge is the governance infrastructure layer that makes AI-generated UI code safe to ship -- deterministically enforcing design systems, accessibility, and brand compliance at the AST level before code reaches production.

Category: AI Code Quality Infrastructure

For AI-focused investors: *"the governance layer for agentic code generation"*

For enterprise investors: *"the Snyk model applied to design systems and accessibility"*

1. Positioning

Elevator Pitch (30 seconds)

AI agents are writing 41% of all code today -- headed toward 90% by early 2027. But nobody is checking whether that code matches the design system, passes accessibility standards, or preserves brand integrity. Bridge is the governance layer that sits inside the AI generation loop. Using perceptual color science and AST-level code analysis, Bridge catches design drift, enforces WCAG compliance, and blocks non-compliant code from shipping -- deterministically, not probabilistically. It's the type checker for design systems.

2. The Market (2026 Data)

AI Code Generation is Exploding

Stat	Source
41% of all code written in 2025 is AI-generated	Multiple sources
46% of code in Copilot-enabled files is AI-generated	GitHub/CleanAim
92% of developers use AI tools in their workflow	Index.dev
100% of code at Anthropic and OpenAI is now AI-written	Fortune
90% AI-generated code expected by late 2026/early 2027	Vocal Media
AI code gen market: \$4.91B (2024) -> \$30.1B (2032)	NetCorp

But AI Code Quality is Terrible

Stat	Source
AI code introduces 1.7x more total issues than human code	Second Talent
48% of AI-generated code contains security vulnerabilities	Second Talent
45.2% of developers say debugging AI code takes longer	Second Talent
75% of tech leaders expect severe tech debt from AI by 2026	Gartner/NetCorp

Accessibility Enforcement is Accelerating

Stat	Source
5,114 ADA lawsuits filed in the US in 2025	UsableNet
37% YoY increase in first half of 2025	EcomBack
5,500+ projected for 2026	BeAccessible
EU Accessibility Act in force since June 2025, fines up to EUR 3M	Level Access
40% increase in pro se ADA filings (AI-assisted)	Accessible.org
1,427 repeat lawsuits against previously-sued companies	UsableNet

MCP is the Distribution Channel

Stat	Source
6,400+ MCP servers registered as of Feb 2026	CData
MCP adopted by OpenAI, Google, Microsoft, Amazon, Anthropic	Pento
MCP market expected to reach \$1.8B in 2025	CData
Figma MCP server live, generates design layers from VS Code	GitHub Blog
Integrated in VS Code, Cursor, Windsurf, Claude Code	Figma Blog

Design Systems are Universal but Unenforced

~80% of enterprises have design systems

Only ~30% sustain compliance after 18 months

Design inconsistency adds 20-40% overhead to frontend dev cycles

The 50-point gap between existence and compliance is the market Bridge addresses.

3. Five Headline Narratives

Narrative 1: "The Type Checker for Design Systems" [Strongest Lead]

Every engineer understands what TypeScript did: turned runtime errors into compile-time errors. Bridge does the same for design compliance. "Wrong blue in production" becomes "wrong blue blocked before commit."

Narrative 2: "AI Generates Code. Bridge Governs It." [Market Timing]

Positions Bridge as the inevitable complement to the AI code generation wave. Every dollar invested in Cursor (\$1.1B raised), Copilot, v0, and Claude Code increases the need for governance. Picks-and-shovels play.

Narrative 3: "The Missing Safety Layer for AI-Generated UI" [Regulatory Fear]

"Who is responsible when AI-generated UI violates ADA or the EU Accessibility Act?" With 5,100+ lawsuits/year and EUR 3M fines, Bridge is the answer.

Narrative 4: "Design Debt is the Next Technical Debt" [Category Creation]

Technical debt has SonarQube. Design debt has nothing. Bridge's HealthScore (0-100, grade A-F) makes design debt visible, measurable, and actionable.

Narrative 5: "The Snyk for Design Compliance" [Comp-Based]

Snyk proved deterministic AST scanning + CI/CD blocking = multi-billion-dollar business (\$8.5B valuation). Bridge applies the identical pattern to design/accessibility compliance.

4. Competitive Position

No competitor occupies Bridge's intersection across all seven capability dimensions.

Tool	Tokens	AST	WCAG	Figma	MCP	Determ.	Color Sci.
Bridge	Full	Full	Yes	Full	Yes	Yes	CIEDE2000
Knapsack	Docs	None	None	Docs	No	N/A	None
Supernova	Files	None	None	Import	No	N/A	None
Specify	Files	None	None	Import	No	N/A	None
Chromatic	None	None	None	None	No	N/A	Pixel diff
Figma Dev	Ref	None	None	Read	No	N/A	None
SonarQube	None	Generic	None	None	No	Yes	None
Snyk Code	None	Security	CI blk	None	No	Yes	None
axe-core	None	DOM	Post-rnd	None	No	Yes	None
Anima	None	None	None	Yes	No	N/A	None
v0	None	None	None	None	No	N/A	None

Key Differentiators

Deterministic, not probabilistic. LLM-based code review produces different outputs for the same code. Bridge produces identical results every time -- required for compliance.

Shift-left beyond CI/CD. axe-core checks after rendering. SonarQube checks after writing. Bridge checks during generation -- at the MCP tool call layer.

Perceptual color science. No competitor uses CIEDE2000. Pixel-diff tools can't distinguish a brand violation from an imperceptible rounding error.

MCP-native. With 6,400+ servers and every major AI tool supporting it, Bridge's MCP architecture is zero-friction distribution.

5. Tailwinds

- 1. The AI Code Flood.** 41% today, 90% by 2027. Every line of AI-generated JSX with a hardcoded color is a governance failure. Manual review is impossible at this volume.
- 2. Regulatory Teeth.** EU Accessibility Act (EUR 3M fines), 5,100+ ADA lawsuits/year (37% YoY growth), pro se filings up 40% (AI-assisted). Compliance has legal liability, not just UX cost.
- 3. MCP as Universal Distribution.** 6,400+ servers, adopted by every major platform. One Bridge MCP server = distribution across Claude Code, Cursor, VS Code, Windsurf, and every future MCP-compatible agent.
- 4. Design Systems Unenforced.** 80% of enterprises have design systems, 30% sustain compliance. 50-point gap = massive design debt. Bridge closes it automatically.
- 5. Proven Shift-Left Model.** Snyk (\$8.5B) proved deterministic AST rules + CI/CD blocking as a category. Bridge applies it to a new domain with a 3-4 year lag.

6. Headwinds and Counters

Objection	Counter
"Can't ESLint do this?"	ESLint can't calculate CIEDE2000 color distance, traverse JSX semantics, or participate in MCP agent loops.
"Feature, not a company."	Figma optimizes for designers. Vercel optimizes for speed. Neither will build a neutral governance layer. Bridge does.
"Market too small."	Design governance is ~\$500M. But Bridge's rule engine extends to IaC, HIPAA, Section 508, PCI DSS. Real world complexity.
"UX designer founder."	Design systems x code infrastructure x AI governance requires this exact profile. 347+ passing tests and a w
"Dev tools are hard to sell."	Three channels: CI/CD gate (5 min to integrate), MCP auto-discovery (agents find Bridge), design debt report

7. Metrics Investors Will Ask For

Product Signals

- 14+ MCP tools operational
- 20 WCAG 2.1 accessibility rules enforced
- CIEDE2000 perceptual color science (hard-to-replicate moat)
- Deterministic: same input + same rules = same output, every time

Business Metrics to Build Toward

- Teams/orgs using Bridge (alpha/beta)
- Time to integrate (target: under 5 minutes)
- Violation detection rate vs. manual code review
- MCP tool calls per AI agent session (integration depth)
- Design debt score improvement over time

8. Recommended Pitch Arc

- 1. Open with the problem:** AI is writing 41% of code. Nobody checks if it matches the design system or passes accessibility.
- 2. Show the pain:** Real example -- AI-generated component with subtle color drift. Show hex values, delta-E score, why it matters for brand. Then show the missing aria-label that costs \$50K in litigation.
- 3. Present Bridge:** The type checker for design systems. Deterministic. AST-level. MCP-native.
- 4. Demo the loop:** AI generates code -> Bridge audits it -> Bridge blocks or auto-fixes -> clean code ships.
- 5. Show the moat:** Perceptual color science, deterministic rule engine, 6,400+ MCP ecosystem.
- 6. Show competitive landscape:** The 7-column table. No competitor has 'Yes' across all columns.
- 7. Show the market:** \$30B AI code gen market, 5,100+ accessibility lawsuits/year, EU Accessibility Act in force.
- 8. Show expansion:** Same engine, new domains -- IaC, healthcare, government, fintech.
- 9. Close:** Team + ask.
